Chang Liu

changl8@andrew.cmu.edu | changliu-drpatient.github.io

Education

Kenneth C. Griffin School of Computer Science
Carnegie Mellon University, Ph.D. Student in Machine Learning 08/2023 - 05/2028(est.)

- Advisor: Prof. Artur Dubrawski.
- Research Interests: LLM post-training, Agentic AI, machine learning in healthcare.
- Skills: LLM fine-tuning; Prompt engineering.
- Courses: Advanced Introduction to Machine Learning, Intermediate Statistics, Advanced Machine Learning: Theory and Methods, Advanced Deep Learning, Machine Learning for Large Datasets.

Yao Class, Institute for Interdisciplinary Information Sciences (IIIS) Established by Prof. Andrew C. Yao
Tsinghua University, B.Eng. in Computer Science 08/2019 - 06/2023

- GPA: **3.91/4.00**.
- TOEFL: **120/120**. Reading: 30, Listening: 30, Speaking: 30, Writing: 30.
- GRE: **340/340**. Quant: 170, Verbal: 170, Writing: 5.

Industry Experience

TikTok: Video Recommendation
Research Intern 05/2026 - 08/2026

- Model user preference on PGC (professionally generated content) to boost recommendation performance.

LLM Research Experience

Experiential Abstractions in LLMs 05/2026 - 09/2026
LLM post-training. Reinforcement learning. verl. Retrieval-augmented LLMs. Carnegie Mellon University

- Develop a novel framework for improving LLM problem-solving abilities by first extracting abstractions from training, and then absorbing them via in-context learning or RL.
- Improve mathematical reasoning abilities compared to naive GRPO, even without a strong teacher for abstraction extraction. pass@1/pass@8: **46.89/70.54** $\rightarrow$ **49.07/71.14**.
- Accepted at EMNLP Findings. Paper link here.

Lightweight LLM agents for MLE 05/2025 - 08/2025
Coding agents. AWS strands. Prompt engineering. Scaffold engineering Carnegie Mellon University

- Develop a lightweight LLM agent for machine learning engineering (MLE).
- Adopt the CodeAct paradigm (draft and revise) and invoke mini-swe-agent as a tool.
- Use AWS's strands library for building the agents.
- Project link here.

Depth pruning and emergent abilities of pruned LLMs 12/2024 - 09/2025
LLM pruning. LLM inference. Huggingface. Benchmarking Carnegie Mellon University

- Propose a novel depth-based LLM pruning method that retains key reasoning abilities under **10**-fold compression.
- Systematically benchmarked the emergent abilities of aggressively pruned LLMs.
- Paper link here.

Healthcare Research Experience

Multimodal outbreak detection in hospitals 10/2023 - Now

Multimodal ML. ML for healthcare. Carnegie Mellon University

- Develop a multimodal machine learning framework for hospital outbreak detection that integrates signals from MALDI-TOF mass spectra, antimicrobial resistant patterns, and electronic health records (EHR).
- Enable cost-effective outbreak detection that can reduce dependency on whole genome sequencing gold standard by **80%** while retaining **80%** discriminatory power.

Multimodal disease target identification through a probabilistic knowledge graph 09/2021 - 05/2023

Multimodal ML. Graph Neural Networks. Computational biology. Tsinghua University

- Develop a novel method of augmenting biological networks with literature evidence to construct a probabilistic knowledge graph.
- Develop a graph neural network to predict target candidates from the knowledge graph, achieving superior performance to state-of-the-art models in terms of accuracy (esp. on sparse data) and literature support for top novel predictions.
- Conduct bioinformatics analyses and cooperate with experimental validation of the identified colorectal cancer and melanoma targets.
